

UNG FACILITIES PLANNING & GIS

Version 1.4

Early 2026

Generates per-campus, per-building employee email lists for space inventory campaigns

CampusEmailLists.py

Purpose

Generates Excel workbooks organized by campus and building, each containing employee names and email addresses for every person whose AD location data resolved to that building. Also produces a flat Facilities_Notification_List.xlsx suitable for Word mail merge. Used for room verification outreach campaigns.

When to Run

- Weekly, as Step 2 of the pipeline, immediately after AD parsing
- Any time a room number verification campaign needs to go out

Requirements

- Python with pandas (no ArcGIS required)
- Parsed AD Excel from Step 1
- Building_Crosswalk.xlsx

Inputs

Item	Value	Notes
Parsed AD Excel	FacStaffWithAddress_MMDDYY_YY_parsed.xlsx	Output of Step 1
Building Crosswalk	Building_Crosswalk.xlsx	Maps AD building names to GIS codes and campus

What It Does

- Loads parsed AD data and applies building crosswalk with two-pass join (City + Building first, then name-only for remainder)
- Applies 96 room range overrides for buildings that share AD names across campuses
- Groups employees by campus and building
- Writes one Excel workbook per campus with one sheet per building
- Writes a flat Facilities_Notification_List.xlsx with all 1,541 records across 61 buildings
- Distributes output to local folder and SharePoint automatically
- Cleans old files before writing new ones

Outputs

Item	Value	Notes
Campus_Dahlonoga.xlsx	Local + SharePoint	33 building tabs
Campus_Gainesville.xlsx	Local + SharePoint	19 building tabs
Campus_Oconee.xlsx	Local + SharePoint	6 building tabs
Campus_Cumming.xlsx	Local + SharePoint	1 building tab
Campus_Blue_Ridge.xlsx	Local + SharePoint	2 building tabs
Facilities_Notification_List.xlsx	Local + SharePoint	Flat file for mail merge

Version Notes

V1.4: Added city-based disambiguation for buildings with duplicate AD names across campuses

V1.3: Added datestamp suffix to output filenames

V1.2: Added multi-destination output: local and OneDrive/SharePoint

V1.1: Added Facilities_Notification_List.xlsx flat output for mail merge
