

UNG FACILITIES PLANNING & GIS

Version current

March 2026

Blanks occupant fields across all feature classes before each pipeline run

Campus_Floor_Plans_ClearFields.py

Purpose

Clears OFF_ASGNE, asgn_to, and Space_Info fields across all feature classes before each AD updater run. This is the mechanism that enforces the blank-slate philosophy: every weekly run starts from zero so the floor plans reflect only what AD can currently confirm. A blank room is an honest answer. A stale name is a liability.

When to Run

- Weekly, as Step 4 of the pipeline, immediately before running the AD updater
- Always run BEFORE the updater, never after

Requirements

- ArcGIS Pro / arcpy
- Write access to TEMP.gdb and UNG_ENTERPRISE_UPDATED_WORKING.gdb

Inputs

Item	Value	Notes
TEMP.gdb\ Campus_Floor_Plans	Feature class	8,436 records — merged all-campus feature class
UNG_ENTERPRISE_UPDATED_WORKING.gdb\UNG_BR\ BRC_FLOORPLANS	Feature class	117 records — Blue Ridge
UNG_ENTERPRISE_UPDATED_WORKING.gdb\UNG_CC\ CC_FLOORPLANS	Feature class	204 records — Cumming
UNG_ENTERPRISE_UPDATED_WORKING.gdb\UNG_DC\ DC_FLOORPLANS	Feature class	5,961 records — Dahlonega
UNG_ENTERPRISE_UPDATED_WORKING.gdb\UNG_GC\ GC_FLOORPLANS	Feature class	1,922 records — Gainesville
UNG_ENTERPRISE_UPDATED_WORKING.gdb\UNG_OC\ OC_FLOORPLANS	Feature class	232 records — Oconee

What It Does

- Presents an interactive menu: TEMP only (default/safe), PROD only, or both
- Requires explicit y/n confirmation before clearing PROD feature classes

- Opens an edit session on each geodatabase and sets all three fields to NULL for every record
- Reports count of records cleared per feature class

Outputs

Item	Value	Notes
Cleared feature classes	In-place edit	16,872 total records cleared across TEMP + PROD
Console summary	Printed to screen	Count per feature class and total

Fields Cleared

- OFF_ASGNE — Occupant surname(s)
- asgn_to — Department domain code (COL_INS_CTR)
- Space_Info — Job title

Safety Notes

Always choose option 1 (TEMP only) when testing. Choose option 3 (Both) only when running the full weekly pipeline. The PROD clear cannot be undone without restoring from the backups created by the updater script in Step 5.
