

UNG FACILITIES PLANNING & GIS

Version 3.5

May 2026

TEST version of the AD updater — targets merged TEMP feature class only

Campus_Floor_Plans_INFO_update_TEST_V3.5.py

Purpose

Identical logic to the PROD updater but targets only the merged Campus_Floor_Plans feature class in TEMP.gdb rather than the five individual campus source feature classes. Run this first on every pipeline cycle to verify results before committing to PROD. If results look wrong, do not proceed to PROD.

When to Run

- Before every PROD run — Step 5 of the pipeline, same session
- Any time you want to test a change to the updater logic without touching PROD data

Key Differences from PROD

- Targets TEMP.gdb\Campus_Floor_Plans (8,436 records) instead of 5 individual FCs
- Creates one backup instead of five
- All other logic — crosswalk, DEHYPHEN_BUILDINGS, Reason column, Excluded export — is identical
- Results should match PROD totals exactly

Inputs / Outputs

Same as PROD V3.5. See Step 5 documentation for full detail.
