

UNG FACILITIES PLANNING & GIS

Version 1.1

December 2025 / March 2026

Generates space reports and campus workbooks without running the full PDF export

Generate_Space_Reports_Standalone_V1.1.py

Purpose

Produces the same CSVs and campus Excel workbooks as the FloorPlanExporter but without the 25-30 minute PDF export process. Useful when PDFs from the previous run are still current and only updated space data or workbooks are needed. Can run without ArcGIS Pro being open in project mode.

When to Run

- Step 9 of the pipeline when running standalone (outside the FloorPlanExporter)
- Any time space reports or workbooks need to be refreshed mid-week without a full PDF run

Requirements

- ArcGIS Pro / arcpy (needs geodatabase access but not the open project)
- FMS.gdb\Campus_Floor_Plans populated

Outputs

Item	Value	Notes
Instructional_Spaces_Report_DATE.csv	OUTPUT_FOLDER	Instructional space summary
Office_Spaces_Report_DATE.csv	OUTPUT_FOLDER	Office space summary
All_Spaces_Report_DATE.csv	OUTPUT_FOLDER	All rooms
[Campus]_Building_Report_DATE.xlsx	OUTPUT_FOLDER\[campus]\	One workbook per campus

Configuration

OUTPUT_FOLDER: C:\...\FICM_MAP_SERIES\temp — update if needed

RUN_DISTRIBUTION: Flag to push outputs to shared drives via FICM_Distribute_Outputs.py

Version Notes

V1.1: Added generate_campus_building_workbooks(); refactored shared GDB read into helper; added distribution step
